Shelter
You may need to take shelter for severe weather (most common) or a hazardous materials release.

During an incident requiring individuals to take shelter, all building occupants should immediately move to the designated Tornado Shelter Areas in the building. If unable to safely move to the designated shelter area, seek shelter in a windowless interior room or hallway on the lowest floor of the building.

First floor occupants should shelter in the restrooms, drink/condiment station, dish return station and stairwell by dish return station. Available areas in the kitchen can be used with guidance from staff such as the staff locker area, meat and veggie prep stations, and storage room. Second floor occupants should shelter in the restrooms and stairwell. Avoid standing near windows, exterior walls, and doors made of glass.

Evacuation
If you need to evacuate the building—for a fire, bomb threat, gas leak, or other event—all building occupants should immediately move to the nearest EXIT. Once outside, proceed to the designated Evacuation Assembly Area. If unable to safely move to the designated Evacuation Assembly Area, contact one or more members of your department or unit to let them know you are safe and inform them of your whereabouts.

Persons with mobility impairments who are unable to safely exit the building should be moved to a designated Fire Refuge Area and await assistance from emergency responders.

All building occupants should immediately evacuate the building and proceed to Parking lot 33, southeast of Eagle Landing.

For more information on what to do in a specific emergency situation, refer to the UNT Emergency Guidelines on www.emergency.unt.edu or the Mean Green Ready App. Call 911 in an emergency!
